

Even Mælum

Bærum · even.maelum@gmail.com · 469 21 177

Available 5 December 2026 to 31 March 2027

EDUCATION

- NTNU, Trondheim** · MSc in Mechanical and Energy Engineering (5-year programme) 2023 – 2028 (expected)
- Grade average 4.70 out of 5 (A = 5). 18 of 23 grades are A.
 - Main profile in robotics and automation.
 - Selected courses: Mechatronics, Control Engineering, Product Development, Machine Design, Finite Element Method (FEM), Information Technology (Python) and Production Technology (all A)
- University of Western Australia, Perth** · Exchange, robotics and data science Autumn 2026
- Courses in robotics and automation, and data analysis with Python and GIS.
 - Teaching and group projects in English.
- Kyushu University, Japan** · Exchange Spring 2027 (nominated)
- Eikeli Upper Secondary School, Bærum** · Natural sciences, grade average 5.2 out of 6 2018 – 2021

PROJECTS

- Robot arm with camera (UR5)** · UWA, mark 9/10 Aug – Sep 2026
- Programmed a robot arm with a camera to see blocks in an unordered pile, calculate their positions and orientations, and then pick and stack them.
 - Trained a machine learning model to recognise different shapes.
- Semi-autonomous wheelchair** · UWA, collaboration with a professor and a fellow student Jul – Sep 2026
- Added obstacle detection to a wheelchair. Distance sensors and LiDAR are used to slow down and stop before obstacles.
 - Designed parts for laser cutting and 3D printing, built electronics and cabling, PCB design.
 - Wrote a 23-page final report.
- SmartMat** · own project with two co-founders 2025 – ongoing
- Pressure mat with compact sensors to detect prolonged pressure in bed and wheelchair and prevent pressure ulcers.
 - Responsible for hardware, software and product development.
 - Software that shows the pressure and risk assessment as a heat map for care staff.
 - Top 20 in a startup competition by Equinor in February 2026.
- Radio-controlled cable puller** · NTNU, Grade A Spring 2025
- Mechatronics lead in the group and contributed to the CAD group.
 - Made a working prototype that pulls and fastens cables in ceiling and wall cable trays, with self-developed radio control.
 - Worked closely with Wibe Group to clarify requirements and realistic test conditions.
 - Wibe Group was pleased and handed the design to its own engineers for further development.
- Autonomous race car** · UWA, team with fellow students Sep 2026 – ongoing
- Building an autonomous race car with camera and LiDAR to compete in July 2027.
 - Follows the track, avoids collisions, controls speed and steering with PID.
- More projects:** UR5 control arm in a group of 4 (UWA, ongoing), ATtiny85 keychain in C++, LED cube controlled by ESP32.

SKILLS

Programming: Python, C++, MATLAB (basic) and Git.

Electronics: ESP32, Arduino, Raspberry Pi, sensors, PCB and soldering.

Robotics and computer vision: UR5, OpenCV, kinematics, control engineering and machine learning.

Mechanical design: Fusion 360, Abaqus, 3D printing, laser cutting and CNC milling (basic).

WORK EXPERIENCE

- Warehouse employee** · Julia AS 2023 – 2025
- Main responsibility for the tool department. Contributed to setting up a new store and routines.
- Military service** · His Majesty the King's Guard, staff soldier (EBA) Jan – Dec 2022
- Reporting of building defects, supplier follow-up and financial reporting. Recommended by the Armed Forces.
- Previously:** Foodora, courier (2023). Jordnært Bærum, driver and logistics (2021 – 22). IKEA, seasonal employee (2021). Byggmester Neteland, carpentry assistant (2021 – 22)

LANGUAGES AND OTHER

Languages: Norwegian (native), English (fluent) and Spanish (basic)

Courses and certificates: Driving licence class B (manual, 2020), forklift certificate T1 (2023), HSE and fire safety courses (2023)
